Application

Delayed switch-off in safety-oriented controls.

ATTENTION!

To achieve the safety levels stated under features of BA 7924.21/002 and BA 7924.21/003, a suitable supervising control must check the NC contact 15/16 before starting to make sure that both relays (K1 and K2) are switched off.

Indication

LED's comes on when A1 / A2 connected to supply

Notes

The output contacts of the two timing circuits are connected in series in the BA 7924.21/002 and /003 modules. This results in so-called switch-off redundancy, i.e. the contact path 27-28 is opened reliably after expiry of the predefined delay time, even if a contact in this path is welded.
